

KĀLO™ SERVICE

Kymeta's KĀLO™ service redefines connectivity with services purchased in familiar, flexible data packages. Now people and sectors that have long been unreachable, underserved, and ignored by traditional networks have access to simplified global connectivity. Purchasing and connecting to KĀLO network services is easy. You'll have access to flexible satellite connectivity for both fixed and mobile applications using Kymeta™ u7 terminals. Providing a fully provisioned end-to-end connectivity solution, KĀLO service unlocks global, mobile access for fast-growing industries that have been historically difficult to support, including maritime, the Internet of things, first responders, buses, rail, energy, connected cars, and more.

FEATURES

- Easy to understand and buy mobile connectivity
- Simple provisioning and auto-commissioning for quick setup
- Comes bundled with Kymeta™ u7 terminals that don't require technicians for installation and setup
- Familiar data package options provided in by-the-gigabyte plans
- Flexible offerings without complicated contracts
- Access to the Kymeta Partner Portal
- Scale-up packages to support fluctuating consumption levels

MONTHLY PLANS

Now you can finally buy services from space the way you want to buy them... by the gigabyte!
