1 About this document

This document provides a summary of environmental and reliability tests that were performed on the Kymeta™ u8 terminal and peripheral products with the objective of introducing external partners to the durability testing of the product.

This document lists the environmental tests that were performed to meet various standards and summarizes the accelerated life tests (ALT) that were used to predict the reliability of the product. The tests presented herein were those performed on the systems and subsystems that are either designed completely by Kymeta, or integrated by Kymeta using custom off-the-shelf components, for example integration of BUC, LNB, and diplexer RF chain of the Kymeta u8 terminal.

For evaluating the results, a failure in the u8 product is defined as system or subsystem loss of function.

2 Standard environmental tests

The following tests were completed successfully to meet IEC and MIL standards.

2.1 Temperature tests

| Item | Standard | Method | Results |
|-------------|-----------|--------------------------------------|---------|
| u8 terminal | IEC 60068 | +55 °C operational 16-hour dwell | Pass |
| | | –25 °C operational 16-hour dwell | Pass |
| | | –40 °C non-operational 72-hour dwell | Pass |
| | | +85 °C non-operational 72-hour dwell | Pass |

2.2 Salt Fog

| Item | Standard | Method | Results |
|--------------|-----------|------------|----------------|
| u8 external | ASTM B117 | 1000 hours | Pass with only |
| components / | | | surface stains |
| connectors | | | observed |

2.3 Shock

| Item | Standard | Method | Results |
|-------------|-------------|---|---------|
| u8 terminal | ETS 300 019 | Combined shock, operational: | Pass |
| | | 40 shocks/axis; half-sine; 10 G for 11 ms | |
| | | Combined shock, non-operational: | Pass |
| | | 6 shocks/axis; half-sine; 31 G, 11 ms | |

2.4 Vibration

| Item | Standard | Method | Results |
|-------------|-------------|---|---------|
| u8 terminal | ETS 300 019 | Combined sine test, operational; 2–8 Hz frequency, 7.5 mm sine level; 8–500 Hz frequency, 1 G sine level; 1 octave/minute; 10 sweeps/axis | Pass |
| | | Combined random vibration test, operational 120 minutes/axis | Pass |

Combined Random Vibration Test (Operational)

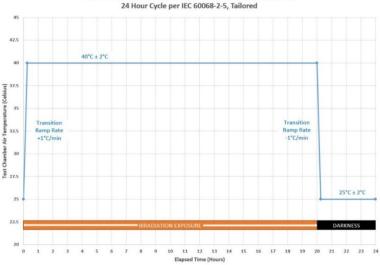

Level: See chart below

| Frequency (Hz) | PSD (G^2/Hz) |
|----------------|--------------|
| 1 | 0.001 |
| 5 | 0.01999 |
| 20 | 0.01999 |
| 26 | 0.01500 |
| 40 | 0.01500 |
| 66 | 0.00605 |
| 117 | 0.00344 |
| 200 | 0.00344 |
| 340 | 0.00119 |
| 500 | 0.00081 |

2.5 Solar loading

| Item | Standard | Method | Results |
|-------------|-------------|---|---------|
| u8 terminal | IEC 60068-2 | 4 cycles of exposure to 1100 W/m ² solar matched radiation | Pass |

2.6 Wind loading

| | ltem | Standard | Method | Results |
|----|----------|-------------|--|---------|
| u8 | terminal | ETS 300 019 | 40–120 mph winds at 0–30° inclination; operational | Pass |

2.7 Ice loading

| Item | Standard | Method | Results |
|-------------|--------------|-----------------------------|---------|
| u8 terminal | MIL-STD-810G | 521.3 "Icing/Freezing Rain" | Pass |

2.8 Ingress protection

| Item | Standard | Method | Results |
|-------------|--|--|---------|
| u8 terminal | IEC 60529, IP6x, dust- tight | Section 5.2, Table 2, First characteristic numeral 6 "Dust-Tight" | Pass |
| | IEC 60529, IPx6, Powerful jetting water, 100 L/min | Section 14.2.6, "Test for Second Characteristic Numeral 6 with the 12.5 mm nozzle" | Pass |

2.9 Altitude

| Item | Standard | Method | Results |
|-------------|-----------------|--|---------|
| u8 terminal | IEC 60068-2-13 | Tailored to 3,600 meters; operational | Pass |
| | EN 50125-1:2014 | Table 1, Class A1, 1,400m; operational | Pass |
| | STANAG 4370 | 9,144 meters; non-operational | Pass |

3 Accelerated life test (ALT)

3.1 Thermal cycle ALT

| Item | Method | Results |
|-------------|--|---------------------|
| u8 terminal | Range from –40°C to +85°C, non-operational. 1- | Tested to 21 cycles |
| | hour dwells at max/min temperatures | |

3.2 High temperature high humidity ALT

| Item | Method | Results |
|-------------|---|---------------------|
| u8 terminal | Steady-state temperature and humidity at 85°C/95% | Tested to 500 hours |
| | RH, non-operational | |

3.3 Hail drop test

| ltem | Method | Results |
|-------------|---|---|
| u8 terminal | Steel Ball Drop, 68%, 81%, 90%, 95% cumulative hail energy percentile | Survived 2 consecutive drop impacts in same vicinity per energy; antenna performance did not change; no radome ruptures |
| | Steel Ball Drop, 98.5% cumulative hail energy percentile | Survived 8 consecutive drop impacts in same vicinity; antenna performance did not change, evidence of internal radome rupture at one impact point |

| Hail Diameter | Hail Mass | Terminal Velocity | Kinetic Energy | Cumulative Probability | Steel Ball Mass | Drop Height |
|---------------|-----------|----------------------|----------------|------------------------|--------------------|----------------|
| 3.2 cm | 15.4 g | 26.5 m/s | 5.4 J | 68% | 360 g | 1.5 m |
| (1.25 in.) | (0.5 oz) | (59 mph) | | | (12.7 oz) | (5 ft) |
| 3.8 cm | 26.6 g | 29.0 m/s | 11.2 J | 81% | 530 g | 2.1 m |
| (1.5 in.) | (0.9 oz) | (65 mph) | | | (1.2 lb.) | (7 ft) |
| 4.45 cm | 42.2 g | 31.3 m/s | 20.7 J | 90% | 760 g | 2.8 m |
| (1.75 in.) | (1.5 oz) | (70 mph) | | | (1.7 lb.) | (9 ft 2 in) |
| 5.08 cm | 62.9 g | 33.5 m/s | 35.3 J | 95% | 1040 g | 3.5 m |
| (2 in.) | (2.2 oz) | (75 mph) | | | (2.3 lb) | (11 ft 4 in) |
| 6.35 cm | 122.9 g | 37.5 m/s | 86.2 J | 98.50% | 1800 g | 4.9 m |
| (2.5 in.) | (4.3 oz) | (84 mph) | | | (4.0 lb) | (16 ft) |
